

## Macrotheque - Total Metallogeny Geosites

The guide to mineral deposit settings around the world comprehensive, informative, logical, intuitive.  
A graphical encyclopedia of host environments & associations.  
A unique empirical framework for predictive exploration.

For international explorers and resource geologists, planners, researchers.  
241 environments and associations.  
two wall charts, 2 x 1m.  
720 page colour volume.

Based on a lifetime of field observation, TOTAL METALLOGENY, GEOSITES 2001 brings together as never before geological environments; rocks, aggregates, and materials associations; accumulations of industrial metals. Individual GEOSITES typify defined environments and succinctly summarise settings and characterisations from which exploration potential and opportunity can be recognised.
